# Art, More than a passion, a calling

Building on a teaching tradition dating back 130 years, ESA Saint-Luc Liège School of Art constantly endeavours to set the benchmark of higher education in the Arts. Every year, we welcome over a thousand students from all walks of life.

Our school prepares students for a career in the field of fine arts, spatial arts, visual arts or conservation. First and foremost, though, we aim to train students to become grounded and competent artists capable of understanding the world of today and of becoming actors within it.

## SOLID FOUNDATIONS

ESA Saint-Luc Liège School of Art promotes pedagogical activities, exchanges and research in close relation with the professional sector. Therefore, all our courses include a mandatory internship.

The modules, be they artistic, technical or theoretical in nature, are fine tuned for every course. Our aim is simple: offer the best possible training in each discipline.

Yet, we also seek to broaden the scope. Subsequently, we offer a series of interdisciplinary modules so that students can quench their thirst of knowledge and feed their creativity.

Moreover, we routinely work hand in hand with other academic institutions on a local, national or international level and constantly strives to improve.

## AN INTERNATIONAL FLAVOUR

We believe strongly in the virtues of travel and intercultural exchanges. Students and staff regularly receive the opportunity to take part in international seminars, workshops, cultural visits, internships and study exchanges.

Thanks to the Erasmus exchange programme and other initiatives, our school has developed a network of partnerships in Europe and across the globe. Furthermore, we encourage our students to be curious and open minded since learning from others – at home or abroad - is part of our DNA. It is no wonder that some of the greatest artists are well travelled world citizens.

## A SENSE OF PLACE: INTENSE AND WELCOMING

Our school is built on a human scale and we work hard to stay in tune with the needs of our students.

The student council – run by students for students - is a dynamic and supportive organisation constantly bringing life to the school and campus.

Our classrooms and the campus grounds are perfect meeting places for students and staff. We encourage interaction not only among members of our institution but also with the University of Liège's architecture faculty that shares our campus.

## CULTURAL DYNAMISM

Culture is the lifeblood of our school. We maintain strong ties with the culture sector of the Liège region and regularly take part in major local events.

At ESA Saint-Luc Liège School of art, we aim to train certified conservators ready to work on the restoration of artistic productions and artefacts. In doing so, we follow the guidelines of the European Confederation of Conservator-Restorers Organisations (ECCO).

The mission of conservator-restorers is to preserve the aesthetic and historic integrity of cultural heritage – from the ancient to the modern, and from the most trifling to the most precious. Their skills rely on state-of-the-art technology based on the latest scientific findings and on the application of the highest standards and codes of conduct of the profession.

Students enrolled in this course choose a specialisation during the second year: ceramics or painting

Our research master is organised in collaboration with the University of Liège. It focusses on contemporary heritage, that is, artefacts that are about to enter the realm of artistic heritage and whose conservation and restoration pose a series of challenges. The specific focus on research of this graduate degree paves the students' way towards a possible PhD career.

This programme centres around experimentation through technical and technological research and trials. Students also learn to analyse the materials that constitute not only the primary artwork but also previous restoration interventions.

Experimentation, trial and errors and research forges expertise. All this knowledge is brought together to promote novel solutions – respecting the highest standards of excellence – to tackle conservation-restoration challenges.

In a deliberate effort to insert students into the job market, we put particular emphasis on building working relations with professionals via internships, workshops and conferences.

# BA Interior Design

[saint-luc.be/ai](http://saint-luc.be/ai)

[Link to module description](#)  
[Department's Social Media](#)

Interior Design, a.k.a. Interior Architecture, focuses on the relationship between space and users. The discipline questions the space in which we live and evolve, in other words, it questions a space's "habitability". Half project manager, half coordinator, interior designers put the finishing touches to architectural interventions adding poetic, affectionate and practical detail.

<b>Interior design</b> atelier	240	240	270
<b>Architecture</b> applied construction	60	60	
<b>Sketching</b> drawing and means of expression	120	120	60

Research	90	90	90
<b>Product design</b> Atelier	60		
<b>Elective modules</b>	120	60	
<b>Total amount of learning hours</b>	960	960	900

Interior Design is intimately linked to architecture. Both disciplines complete one another. Albeit, interior design strives to transform building culture into living culture.

# MA INTERIOR DESIGN BUILT HERITAGE

The aim of this master's degree is to establish and deepen the students' skills with regards to spatial interventions in historical and heritage buildings.

Deontology of restoration		30

The course teaches students to understand and measure the conjugation of space and time using specialist knowledge of history, aesthetics, techniques and composition.

Student learn to adopt a critical approach in order to highlight a place's intricacies so that they can carry out a project that is both respectful of the context and coloured by a creative dimension. Students must demonstrate autonomy, humility and creativity in the construction of their project, which must be in keeping with the current era without disrupting the building's intrinsic qualities.

This specialisation programme leans on the rich built heritage (both classified and non-classified) of Liège province composed of secular, religious, military, domestic, rural and cultural buildings. Students thus enjoy multiple possibilities to develop an individual research project enshrined in the local context. Composing with all these different factors, students learn to manage their project autonomously or within a team of experts.

<i>Furniture design Atelier</i>	60
<i>Industrial design Theory</i>	30

This specialisation programme aims to develop students' skills and insight in the field of furniture production. During the course of their degree, students work on different types of furniture items: furniture tailored to a specific architecture, furniture conceived for industrial production or unique furniture pieces.

<b>History and current art trends</b> in furniture	30
<b>Elective modules</b>	60
<b>Techniques and technology</b>	
Computer sciences	
<b>Architecture</b>	
Applied construction	
<b>Interior Design</b>	
Project research	
<b>Thesis</b>	900
<b>Design atelier</b>	705
Joint atelier	120
Specialisation atelier	120
<b>Total amount of learning hours</b>	

To achieve this, next to functional and formal dimensions, we lay emphasis on technical aspects and on the economic dimension of the project in link with the different realities of the professional context (furniture designers, manufacturers, etc.).

Creating furniture goes beyond meeting specific needs and constraints, it is also about asserting a vision of society that reflects contemporary issues such as how we relate to one another, how we relate to our environment, how we relate to consumer society, etc.

Interior Designers specialising in furniture design need to be able to combine advanced technical knowledge, creativity and feeling. They are open minded, follow current design trends, evaluate challenges and know how to communicate. More importantly, they can bring all these qualities together to develop and create the perfect piece of furniture.

## MA Interior Design

[saint-luc.be/ai](http://saint-luc.be/ai)

During the course, students develop a research project in relation to their master's thesis. Alternatively, they can focus on fulfilling a real-world demand, working closely with a project manager, from the onset of the project to the finishing touches. In both cases, students follow a methodological approach based on analysis, synthesis, initiative and enlightened decision making. Mobilising all adequate resources, students measure the challenges that confront them and elaborate ways to complete the project.

By the end of the programme, students are comfortable integrating an interdisciplinary work group with eyes to develop the entire (or specific) stage design of a project.

# BA GRAPHIC AND COMMUNICATION DESIGN

	<b>720</b>

Students who choose this specialisation learn to question the concept of identity - in various fields of application such as packaging, stage design, signage, digital applications, etc. - from an anthropological, economical, socio-political, artistic and media perspective.

This course is at a crossroads of disciplines bringing together communication, design and social sciences. Students are invited to explore and develop different visual propositions thereby bringing innovative solutions to institutional identities, product and event branding, political communication, etc.

# MA Graphic and Communication Design

[saint-luc.be/cvg](http://saint-luc.be/cvg)

The Social design programme aims to empower students to mobilise, deploy and share their artistic skills to help tackle the issues of our time. Graphic design thus becomes a method of common reflexion shared among stakeholders to solve societal problems. Against this backdrop, students use innovative approaches in domains such as service design, stakeholder management, graphic expressions of public opinion, digital technologies and open source software.

The editing programme aims to refine the reflexive capacities of students regarding written communication. Students can thus measure the role and weight of contemporary writing in a modern world.

Set at the crossroads of visual and communication design, the editing master seeks to go beyond typographical approaches to graphic design - be they digital or traditional. Students are trained to develop their own mediums of artistic expression such as art books, independent publishing, multimedia, signage and institutional identities.

## BA + MA Industrial Design

Designers collaborate with project managers or manufacturers at every stage of the development of new products and ancillary services. Finding innovative ways to tackle the environmental, economic, social, cultural and technological issues of today and tomorrow is central to our mission.

Graduates of the programme can embark on a number of different career paths as freelancers or employees. From the conception of kitchen appliances and vehicles to sustainable street furniture and medical equipment, the array of domains in which designers are needed knows no boundaries.

Our aim is to train designers that can satisfy the demands and requirements of the manufacturing industry whilst bearing in mind the social and environmental challenges of our time. Students learn to work in an interdisciplinary context with professionals from different sectors (engineering, marketing, healthcare, production, etc.) through tested collaborative methods.

Images conjugate and multiply the power of words.

In this programme, students learn to perfect their drawing skills by working on expressions, attitudes and movements. They discover how to use colour and to create a graphic atmosphere. They also train to master the technical skills required to design computer graphic content creation. Theoretical, technical and artistic modules guide students on their path towards artistic production.

Although imagination, expression and story-telling take centre stage in the art of illustration, transposition, composition and interpretation are important. We explore these notions through the use of a number of mediums including pencils, brushes, pens, ink, pastels, gouache, watercolour, etc.

### BANDE DESSINÉE - COMICS

“Bande dessinée”, or comics, is a major artistic and cultural practice in Belgium.

According to Will Eisner, comics constitute the main sequential application of art to paper. Sequential art is the arrangement of pictures, images and words to create narrative content or to dramatise an idea. Comics create narratives using a series of boxes to create a sequential storyline. Mastering the art of this format is key for the students' development.

For this reason, students are trained, from the very start of the programme, to produce significant images and to conceive powerful stories. They learn to organise the different elements into narrative sequences while keeping in mind the basic principles of comics: communication with readers through story-telling.

## BA FINE ARTS

### PAINTING -

### SCULPTURE

Our Painting and Sculpture courses aim to enable students to express themselves through painting, sculpture, drawing or any other medium befitting their need for creative expression. In a concerted effort to go beyond the boundaries of the two disciplines, an important number of theoretical and artistic modules are taught jointly to both groups of students.

Students are constantly stimulated to listen, watch and feel in order to learn how to embody their perceptions and to materialise the imaginary through art. From concept to creation, students learn to produce pieces full of artistic relevance.

Understanding colour, textures, different types of materials, shapes and volumes is a key part of the training. During the course, students will seek to find within themselves, ever more intensely, the emotions that give birth to artistic expressions, constantly searching to articulate their authentic singularity.

Artistic modules	240	240	240

<b>Internships</b>			240

Brainstorming, creativity and concept development are the words best used to sum up this course. Ad campaigns are devised to showcase specific products, catch the eye of the public and create brand cultures following a comprehensive communication strategy relying on both digital and print mediums. Moreover, a successful ad campaign is completed by a carefully planned marketing strategy. In other words, creativity and strategy are paramount. Therefore, advertising consultants are by definition curious and always keen to learn more. This course is thus aimed at broadening the knowledge of students through a wide range of modules including marketing, art history, printing, computer graphics, etc

Graduate students can look forward to becoming campaign managers, copywriters or graphic designers – as employees or freelancers - in the advertising and communication's industries.

### *Technical english*

Our photography course champions a broad and versatile approach. We offer a large number of hands-on modules and train many technical skills. The course explores the realms of artistic, commercial and freelance photography.

We go through all the basic techniques: studio, reporting, artistic research, graphic research, infographics, picture editing software, the different shooting approaches, lighting and printing techniques, etc. In addition, the photography course features an introduction to videography.

After having completed the three-year course, young graduates (BA) will be able to apply their skills in various sectors such as the fashion industry, advertising, press agencies or even work as a freelance press photographers or image creators.

# POSTGRADUATE DEGREE

## IN TEACHER TRAINING

Co-organised with the University of Liège, this course seeks to train graduates to become competent teachers; teachers who promote a sense of citizenship within a classroom; teachers who put emphasis on the intellectual, artistic and emotional development of students and pupils; teachers who understand the core principles of their discipline as well as the interdisciplinary dimension; teachers capable of building, moderating, testing and evaluating a learning unit; teachers who can supervise group projects; teachers able to measure the ethical implications of their day to day work; teachers who master communication and expression techniques; and, lastly, teachers who are able to maintain a critical and autonomous stance towards artistic disciplines.
